

NOTE: Colour and shade variation are inherent qualities in all fired ceramic products.

Borrowing from history, the concept for the Middle Earth Honeycomb Pavers comes from the hexagonal unglazed tiles that were prevalent in the late Roman Empire. In more recent times it is the southern French town of Salernes that is famous for the red hexagonal tiles. Like the Salernes tiles and following the same centuries old techniques, Middle Earth Honeycomb pavers are manufactured from a mixture of high iron content clays which after being shaped by wire cutting are fired at temperatures over 1100 C. With time the pavers will acquire a unique aged patina that will highlight the natural colours of the clays bringing a little bit of Provence to your home. Pavers have individual colour and patterns making their own textures and designs and offer a unique effect creating a lasting ceramic, non-slip, and colourfast pavement.

Benefits Middle Earth Honeycomb Pavers offer: **Paver Colour:** Flashed Terracotta

High Strength - with a "tile quality" surface

Suitable for driveways - and paths and swimming pools

Do not Reflect Sunlight - will not dazzle

Long Lasting - easy to maintain and no pattern or glaze to wear out

Colourfast - will not fade with age (unlike concrete, will not effloresce through free lime in the cement)

Factory Treated - to protect the pavers from water absorption and frost protection

Easily Installed - can be installed on a compacted metal fines base (no concrete base required). Ideal for D.I.Y. installation.

Size: 165x165x33mm - Hexagonal

Coverage: 40 Honeycomb Pavers per square metre

Weight: 60 kgs per square metre
